

Maths is  
fun

**This week, practise multiplying using the column method. Take one sheet per day to spread out your learning. If you manage to do this quickly, try some different topics such as those listed below:**

*We know you are working hard and would like to direct you to some additional activities for the week.*

White Rose Maths are doing 'Home Learning' videos and worksheets that can be downloaded here: <https://whiterosemaths.com/homelearning/year-5/>  
There are two week's worth of videos and activities and these are topics we have already covered in Year 5, so they are great to review. Each week, White Rose will release another set of home learning materials, so keep revisiting the website regularly.

Next week, we will be practising adding and subtracting time, so you might want to recap this using the following website <https://www.mathsisfun.com/time-add-subtract.html>

As always, Daily 10 is a great way to maintain fluency and improve the speed of calculations. Record your timings and scores over the week and see if you can get even quicker/more accurate! <https://www.topmarks.co.uk/maths-games/daily10>
